Cellulite Remover LAIN MICROLIPO (Reconditioned)

Used, in very good condition,
Italian Production (2016),
Power supply: 230 V,
Frequency: 50/60 Hz,
Power consumption: 150 VA,

This is a new minimally invasive technique used to remove accumulated fat as well as lipodystrophy or well-known cellulite. The apparatus works using high-frequency cavitation ultrasounds. This innovative method should not be confused with traditional liposuction. It models the body with minimal invasiveness of the treatment. The duration of the treatment is from 20 to 30 minutes, and the recovery time is very short. Ultrasounds are introduced by a thin titanium probe with a cross-section of 2 mm and the size of 140 x 180 mm, they dissolve evenly the fat we want to get rid of and at the same time are protected venous and nerve structures present in the tissue. The treatment is eligible for local anesthesia, which can be repeated after a few weeks if necessary,

Innovative painless method,

Short convalescence,

Simple operation of the system,

Treatment to be performed under local anesthesia,

The fluid produced is naturally excreted and partially removed by means of a syringe,

One session is enough to get excellent results, comparable to liposuction,

There are no problems with clots, leaks or swelling,

The patient can resume normal daily activities on the same day of treatment,

The frequency range of the ultrasound wave: 37 - 42 kHz,

Number of transdermal warheads: 2,

The diameter of the cannula: 1.5 and 2 mm,

Maximum cannula temperature: 26°C,

Nominal power adjustable: 2 - 50 W,

He has issued a valid Technical Passport,

Warranty:

6 months for the domestic market - Poland,

1 month for the international market,

Possibility of financing (only Poland): Instalments, Leasing, Loan
